

Water Fountain

Everyone is health conscious these days, so access to high quality drinking water is vital, but you don't want any hassle. We can offer a refreshingly simple answer: **The Water Fountain.**

The Water Fountain delivers an instant and constant supply of the highest quality drinking water and utilises a direct chill system. Because the Water Fountain, unlike bottled water coolers, is supplied through the mains, it does away with the problems of storage, lifting heavy water bottles, degradation and sanitisation, not to mention running out.

The Fountain is constructed of high quality, plasticised coated steel, making it ideal for locations where high usage is expected, with limited maintenance requirements.

Features:

Push button bubbler and sports bottle/carafe filler

Ventilated condenser for better cooling/high performance

1 micron carbon block filter, improves taste and ensures water is free from harmful bacteria

DIRECT CHILL

CARBON
FILTRATION

Water Fountain

Specification

Capacity 25 litre capacity per hour

Colours Stainless steel sink top

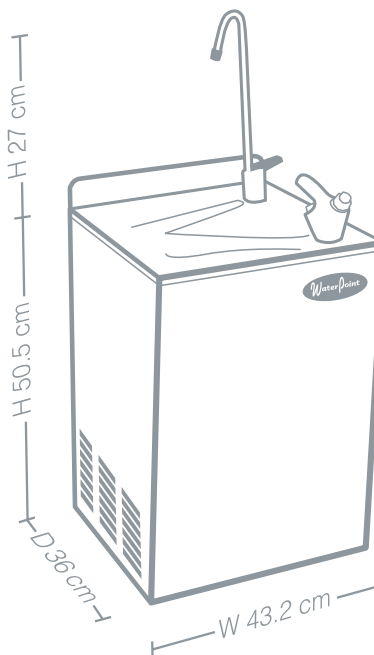

Options Freestanding or wall mounted.
Wall option can be positioned at required height for children/ disabled users.

Installation Requirements

To ensure that the Water Fountain can be installed quickly and smoothly in your proposed location, each machine will require a 13 am (240 AC) switched socket, which should not be more than one metre from the machine. Each fountain needs to be supplied with water from a rising main. Access to waste drainage is required.

Weight
Freestanding - 29Kg

Weight
Wall mounted - 26Kg
