A cluster of several translucent blue water bubbles of various sizes, some with highlights, floating in the upper right corner of the top teal section.

the natural choice

Quality, high volume, pure drinking water on tap

natural solution

The Watermarques systems provide fresh, purified, chilled drinking water that is constantly available on tap. Reusable glass bottles do away with the need to buy, store, chill and dispose of large quantities of glass and plastic bottles, thus eliminating the continuous deliveries and road miles required with bottled water.

With many companies striving to meet a green agenda, a Watermarques system is the perfect practical solution, providing constantly pure water on tap.

refreshingly simple

The Watermarques systems are designed specifically to meet the needs of venues where there is high water consumption such as conferencing and banqueting, corporate hospitality and restaurants. Watermarques offers you an extensive range of watercoolers that are fully flexible and customised to provide a specific solution to suit your requirements and venue. All of this is supported by a first class nationwide service.

served with style

Serve water in style with our reusable glass bottles. These are supplied with the Watermarques brand and come with each Watermarques system.

Our bottles come in clear and frosted glass allowing you to distinguish between still and sparkling water. Their smooth and simple design provides a sophisticated means of serving environmentally friendly, pure filtered tap water in any setting.

Branded bottles

Alternatively you can promote your company to your customers and visitors and have them branded with your own company logo.

cost effective

Installing a Watermarques system and dispensing the water as and when needed, eliminates the need to buy large quantities of branded bottled water, which can be expensive and difficult to store and chill in large numbers.

As the glass bottles are reusable and the water supply is endless, then a Watermarques system can help to reduce water hospitality costs by up to 90%, making it far more efficient and cost effective than traditional methods.

The Watermarques system

The Under Counter System

Available as:

- Cold Still
- Cold Still and Sparkling

Base unit required:

- Cabinet size 500mm*
- *Room for gas bottle required for sparkling option
- *Ventilation required

The Under Counter System

Available as:

- Cold Still
- Cold Still and Sparkling

Base unit required:

- Cabinet size 500mm*
- *Room for gas bottle required for sparkling option
- *Ventilation required

Features:

- Fresh chilled, still and sparkling water
- Anti flood mechanism
- 3 Stage purification
 - in-line UV
 - 1 x 1 micron filter
- Dry Chilling Technology
- 22 litres per hour
- Frees up valuable worktop space
- Can also be used to fill bottles
- Choice of taps available

When space is at a premium but you still want top quality water then our space saver is the ideal choice.

By separating the filtration system from the dispensing taps, the space saver allows you to drink freshly filtered chilled water in the smallest area. By fitting the heart of the machine snugly in an out of the way cupboard and then piping the water, the space saver can fit into the smallest kitchen.

The Watermarques system

United Utilities

United Utilities, Manchester Council and Waterlogic launched a "Tap Into Water", campaign to help restaurants and conference centres of Greater Manchester save up to 90% on drinking water costs. The aim was to raise awareness of the amount of bottled water that is served every year, primarily through the hospitality sector and how that could be easily replaced with tap water. "The Watermarques system offers the ideal solution to help alleviate this growing problem by supplying a constant supply of water".

Helen Wilson, Marketing Manager
United Utilities

David Lloyd

"Watermarques offers a vast improvement over the previous method used for providing drinking water. Before, the bar staff would fill up jugs of iced tap water and set these on the bar top for members to help themselves. With high demand, staff would frequently be required to re-fill, often resulting in members queuing for water. Now, with the new Watermarques system installed, water never runs out, no staff time is wasted and members are delighted with great tasting chilled water on demand".

David Hage, Hospitality Manager
David Lloyd

York St John University

"We use the Watermarques system to service our hospitality areas, where we supply tea, coffee and bottled water and we also use it to provide water for conferences and events. There are about 7,000 people on site and before we had the Watermarques hospitality system we would get through around 200 bottles of bought in water every week. For me one of the biggest advantages is the cost reduction, but for the University the sustainability benefits are seen as very positive".

Peter Coats, Catering service provider
York St John University
